

September 20, 2022

Dear Colleagues:

On behalf of the International Tribology Council, I offer my sincere thanks and congratulation to all of you for organizing and attending the 2022 BALTTRIB Conference in Kaunas, Lithuania. As in the past, BALTRIB continue to expand and feature cutting-edge research discoveries in tribology including friction and wear of moving mechanical systems of agricultural, transportation and industrial machinery including their lubrication, tribochemistry, surface engineering and other pertinent aspects. More importantly, leading scientists and engineers from around the world are presenting some of their latest research findings to foster innovation, collaboration, and new networking opportunities which will ultimately help towards a common goal of a clean, green, and sustainable future for all of us.

As we embark into the 21st Century, the global challenges that we are all facing in the energy, environment and sustainability fronts are growing bigger and threatening our well-being more than ever. As a global tribology community, we must all rise to these challenges and intensify our efforts to make a positive difference in the lives of not only the humanity but also all other living species of our planet. In closing, I reiterate my sincere thanks and hearty congratulations to all of you for making the BALTTRIB-2022 Conference another success story. I have no doubt that the outcome of this conference will help strengthen our resolve toward a sustainable future that is also ecologically diverse and environmentally sensible.

Sincerely,

Ali Erdemir, Ph.D.
President, the International Tribology Council
